

CLAIMS

What is claimed is:

1. A water-cool radiator module comprising:
 - a shell body with an opening, several radiating holes located on one side of said shell body;
 - 5 a pump is installed inside said shell body, a hot water pipe in continuous bending shape is installed on said pump, several radiating fins are aligned orderly on the bending section of said hot water pipe;
 - 10 a water tank is installed inside said shell body and connects to a cold water pipe and a hot water pipe;
 - 15 a fan is installed between said radiating fins and said pump and connects to said cold and hot water pipes;
 - a waterhead connects to one side of said cold and hot water pipes that extending from said shell body;
 - 20 a supporting part is fixed in a slot and sticks on the computer case;
 - a fixing part is installed on one side of said supporting part, an opening is installed corresponding to said radiating holes.
2. The water-cool radiator module recited in claim 1, wherein said supporting part is stuck on one side of said shell body.
- 20 3. The water-cool radiator module recited in claim 1, wherein said supporting part sticks on two sides of said shell body.
4. The water-cool radiator module recited in claim 1, wherein said fixing part connects to one of said supporting parts.
5. The water-cool radiator module recited in claim 1, wherein said fixing part connects to 25 more than one of said supporting parts.
